FOR SAGE 300

TAIROX · DATA MANAGEMENT SUITE

Fast Data Integrity

Find Sage 300 data errors fast, every night

Fast Data Integrity checks Sage 300 data for errors, and TaiRox built it to run much faster than the standard Data Integrity check. Run it on demand from a console, or every night on many databases. Built for IT staff and consultants.

HOW IT WORKS

Connect
Log in to SQL Server

→

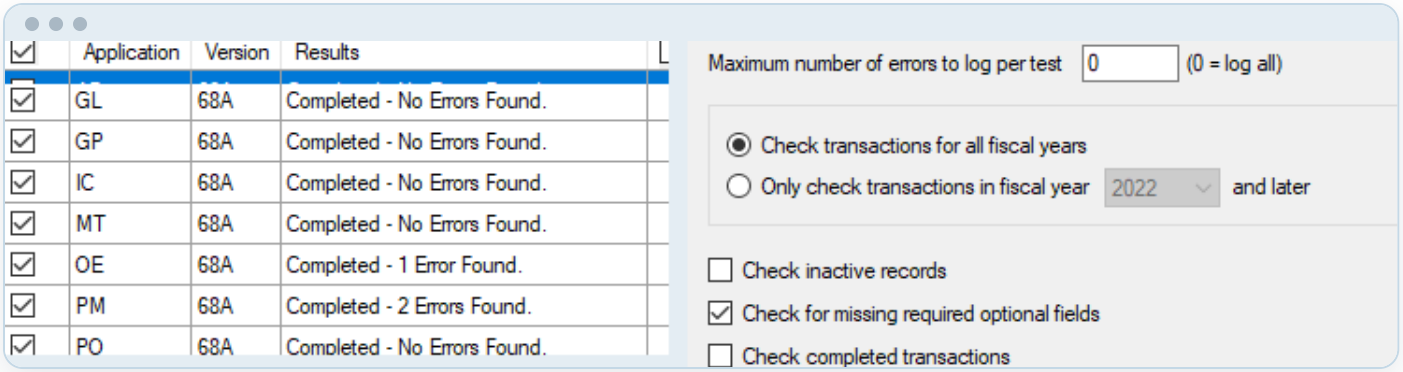

Choose modules
Tick modules and filters

→

Run the check
See results by module

→

Review the log
Every test and error

Results by module, plus settings to skip old years, inactive or completed records

▸ Watch the demo

KEY CAPABILITIES

Checks 16 modules
Including A/P, A/R, Bank, G/L, I/C, O/E, P/O and Project and Job Costing, plus TaiRox add-ons.

Cuts out the noise
Check only recent fiscal years, and include or skip inactive and completed records.

Reads the tables directly
Bypasses Sage 300 auto-correction, so it shows issues that can upset reports and BI.

Deletes orphan records
The console can remove orphan rows for the modules you choose, after a warning.

Nightly scheduled checks
Creates its own Windows Scheduled Task to check many databases in one job.

Emails the results
Sends the log to any address, or only when errors or warnings are found.

GOOD TO KNOW

Two programs
A console for one database, a scheduler for many.

Error limits
Cap errors per test to keep logs short.

Secure settings
Saved settings with encrypted passwords.

Full log
Lists every test run and orphan deleted.

For Sage 300 2012 to 2026 on SQL Server. The console runs without Sage 300 installed; the scheduled version needs it.

See how it fits your business
